

Style and Simplicity | *Redefined*

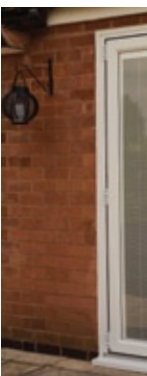

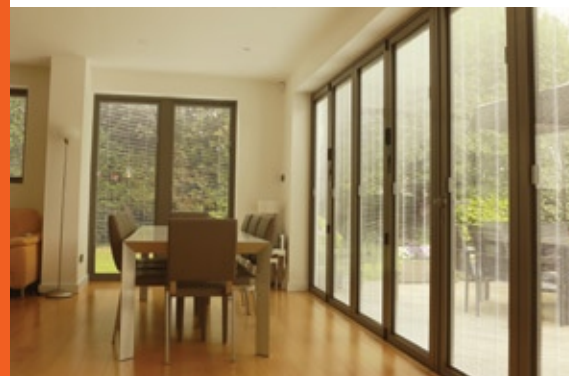

The perfect choice for garden rooms, conservatories and multi-folding doors.

They do not interfere with the operation of doors or windows and are easily colour coordinated to provide a seamless elegant finish. The blinds are raised, lowered and tilted using innovative but simple moving magnets. Therefore the units are kept hermetically sealed, are easy to use and virtually impossible to break.

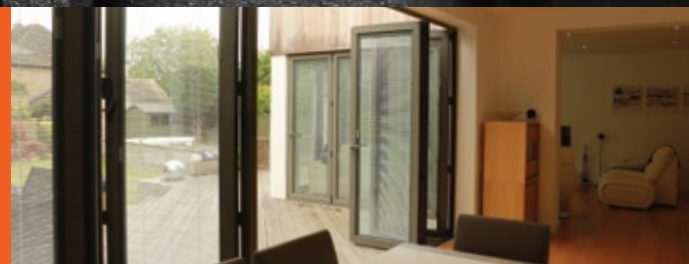

Also highly effective for use in residential, medical, educational and commercial buildings they provide a flexible and energy efficient solution to managing a building's environment. Ideal for hospital wards, classrooms and public areas such as receptions, bars and restaurants, they provide particular benefits for sensitive areas such as computer and research laboratories.

For the designer, blinds are a creative, contemporary and practical solution adding elegance and style while at the same time offering discreet privacy and a safe and low maintenance answer to providing an effective control of light and heat.

Blinds are available in cavity widths of 18mm, 20mm and 27mm. All blinds are incorporated in sealed units which are filled with Argon gas and have toughened glass as standard. A typical blind unit has 4mm glass throughout, however almost any thickness of glass can be specified, as can patterned, tinted, laminated and fire-rated glass. To ensure the highest levels of thermal performance it is normal for a softcoat to be incorporated in the sealed unit however other coatings can be specified if required.

Style and Simplicity

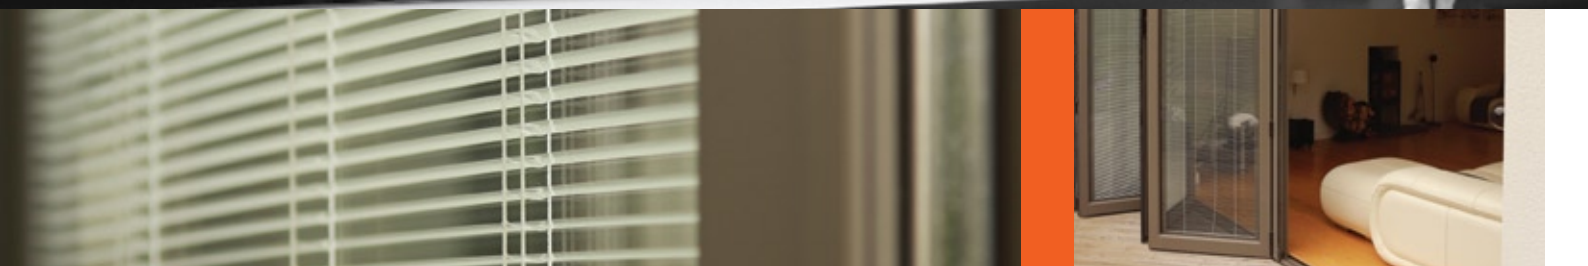

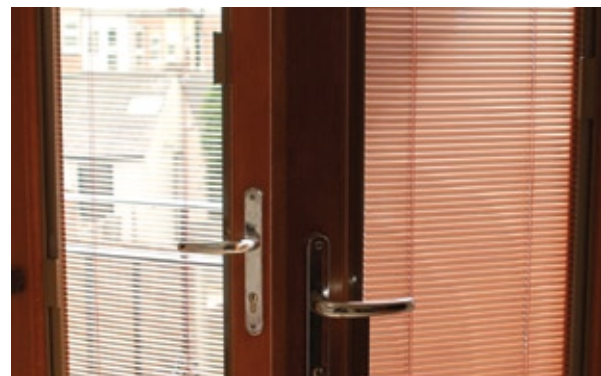

Innovation in privacy, stylish shading and solar control solutions

Sealed glass units incorporating integral blinds are the perfect glazing option for a wide range of situations where an unobtrusive blind is needed. These blind systems are ideal for use in conservatories and invaluable in commercial premises or any settings where low maintenance, privacy and hygiene are priorities.

Choose from either a Venetian or Pleated blind totally enclosed inside the cavity of high performance insulating glass sealed units, making them dust, allergy, & maintenance free. With 14 colours to choose from and delivered in 15 days from order, This blind system offers all the benefits of blinds without any cleaning and maintenance chores.
